CASE STUDY

Project: Relocation request
Location: Leicester

Overview

Pickering's were tasked by Leicester City Council to move a temporary modular building from one school, across Leicester to another.

This involved tight access, road closures, parking suspensions, which was all applied by ourselves. We had one day to complete the lift but had been working on the foundations 3 months prior to the move.

Our Solution

Our team ensured that there was minimum disruption to the schools and their neighbours. The first school had very tight access which involved specialist lifting teams, vehicle escorts and movement orders to ensure a smooth transition.

The site at the second school, where the building was transferred to, was originally a pond which we had to drain and liaise with the environmental protection services to ensure a safe removal of all animals. We then laid the foundations at a suitable depth in order to provide all of the services to the new temporary modular building site ahead of its arrival.

Now the unit has been successfully moved to its new home, we are working on refurbishing the units to education standards inside and out.

"They went above and beyond on this project, making sure our site was kept clean and secure and their quality of work is excellent."

- Premises Officer
