

Fire Safety Technology

DATA SHEET

Site monitoring 24/7 to provide a unique fire alert system to protect life and property in an emergency. Suitable for businesses in all sectors especially those with no existing fire alert system it can be quickly set-up and ready to use.

Features & Benefits

- Easy to install, maintain and re-deploy for immediate protection in an emergency.
- Real time alerts sent directly to any mobile device and pin-points the alert location to allow you to respond to an incident quickly to save people and property.
- Fully certified to EN54 to help ensure your site fully complies with BS5839 & JCoP.
- Units available include Base Station, Call Point, Heat Detector, Smoke Detector, Link and INterface so you can choose the right solution for you.
- Unlimited number of units can be used and you can add, remove or re-position units, as required, for continued protection and flexibility to change in circumstances.
- No need for external power due to long life batteries in each unit to provide instant power so you're ready to go.
- Dust resistant smoke sensors saves you time and hassle by avoiding false alarms.
- Units can be used in any combination to meet your specific site requirements.
- Can be linked to other systems such as building management or access control to integrate with other systems or having standalone.
- Works on GSM & 4G with REACT cloud based platform for the best connectivity.
- At the end of your project, units can be simply removed and installed on your new site with no need for reprogramming or reconfiguration.
