Mobile/Portable Generators

ALWAYS BE PREPARED

Power on site - affordable and reliable

ask for details

We have a range of mobile and portable generators from the handy 2kVA petrol set right up to a substantive 25kVA diesel unit fitted to a road tow trailer.

The mobility and portability of these generators means that a site or an event can have lasting, clean power exactly where it is needed.

Generators all comply with HSE regulations for emissions and noise, with the 25kVA sets fully canopied and silenced to whisper-quiet levels, making them ideally suited for use in urban or noise sensitive situations. Lockable canopies will help guard against security issues.

Also available are ancillary items, such as: fuel tanks, extension leads, distribution panels in single-phase (110/240v) or three-phase (415v).

For expert advice regarding the correct generator for your application contact your local Depot Manager or the National Sales Line on 01530 270302

Portable solutions

Fuel cubes for safe storage and distribution of diesel.

Distribution Boards

A comprehensive line of distribution panels are available to hire. Configurations such as single, three-phase and 110v systems can be made available. Also we stock a range of extension leads for hire to suit individual requirements.

Speak to a Pickerings Plant Depot Manager for more details or the National Sales Line on 01530 270302
